

**Amendments to the Claims:**

Claims 1 and 35 - 37 are currently pending. Claims 2 - 34 have been voluntarily canceled without prejudice for the reintroduction of one or more of the limitations of claims 2 - 34 in one or more continuing applications. Claim 1 has been amended. Claims 35 - 37 have been added. This listing of claims will replace all prior versions, and listings of claims in the application:

**Listing of Claims:**

- 1                   1.       (Currently Amended) Apparatus for accessing content contained on a  
2 storage medium, the content including a plurality of programs such that each program includes a  
3 plurality of scenes and each scene includes a plurality of frames, the programs and the scenes  
4 include information for moving pictures, comprising plural frames, the frames organized into  
5 plural scenes, the scenes organized into plural programs, the apparatus comprising:  
6                   a driver module configured to access the content and having a driver output to  
7 produce an information signal representing for the accessed content;  
8                   a decoder module operatively coupled to the driver module to receive the  
9 information signal;  
10                  a user input module configured to receive user input with at least a select button  
11 and/or a cursor button; and  
12                  a system control module configured to control, ~~wherein the system control~~  
13 ~~module controls~~ the driver and decoder modules to produce a first display signal for the plurality  
14 of programs, to generate program identification information for each of the programs and to  
15 produce a first display signal representing the program identification information;  
16                  wherein the system control module, in response to receiving a user-specified  
17 program selection from the select button user input module, is configured to control ~~controls~~ the  
18 ~~driver decoder~~ module to produce a second display signal for the plurality of scenes, and  
19                  wherein the system control module, in response to receiving a user-specified  
20 program selection from the cursor button, is configured to control the decoder module to play

21 back automatically the selected program as a small frame if there is no button input for a select  
22 period of time.  
23 ~~access a representative frame for each scene comprising the program~~  
24 ~~corresponding to the user specified program selection and controls the decoder module to~~  
25 ~~produce a second display signal representing the representative frames.~~

1 2 - 34. (Canceled)

1 35. (New) The apparatus of claim 1, wherein playback is performed as skipping  
2 playback or as fast-forward playback.

1 36. (New) Apparatus for accessing content contained on a storage medium, the  
2 content includes a plurality of programs such that each program includes a plurality of scenes  
3 such that each scene includes a plurality of frames, the programs and the scenes include moving  
4 pictures, the apparatus comprising:

5 a driver module configured to access the content and having a driver output  
6 configured to produce an information signal for the accessed content;

7 a decoder module operatively coupled to the driver module to receive the  
8 information signal;

9 a user input module configured to receive user input with at least a selection  
10 button or a cursor button; and

11 a system control module configured to control the driver module and the decoder  
12 module to produce a first display signal for the plural programs, wherein the system control  
13 module, in response to receiving a user-specified program selection from the select button,  
14 controls the decoder module to produce a second display signal for the plurality of scenes, and  
15 wherein the system control module, in response to receiving a user-specified scene selection  
16 from the cursor button, is configured to the decoder module to play back automatically the  
17 selected scene as a small frame if there is no button input for a select period of time.

- 1                    37. (New) The apparatus of claim 36 wherein playback is performed as skipping  
2    playback to fast-forward playback.
